

In addition to a full range of Bucket Liners and Accessories PTI also offer specialist products for bucket enhancement and bucket liner protection.

EZ Step

The quick and easy way out of an aerial bucket with a liner. Strong, lightweight, and impact resistant polycarbonate.

Fibreglass Scuff Pads

With a built-in step

Designed for use in bucket liners, these scuff pads feature a moulded step for easy exit and added safety. They protect the floor of your insert, and the 'tru-grit' surface helps to eliminate slipping. The product is manufactured from high quality fibreglass for strength and longevity. Available in all standard configurations, and may be used in liners with or without moulded step.

Tru-Grit Scuff Pad

For 1 & 2 man buckets

PTI's exclusive process suspends thousands of grains of grit in a moulded polyethylene scuff pad. The pad is super smooth on the outside to protect the bucket or insert. Inside, the pad's gritty surface provides the linesman with non-skid footing and greater safety.

The scuff pads are available in sizes to fit most aerial lift bucket liners.

Hy-Jacker Bucket Floor

The Hy-Jacker adds three or five solid inches to the bottom of a bucket or liner. Its rugged polyethylene shell is filled with polyurethane foam for greater strength and longer life. It drops into place quickly and pops out easily.

The Hy-Jacker fits virtually every size of aerial lift bucket and offers maximum working comfort and safety.

Lighthawk LED Holder

This safe, fully non-conductive wrap-around housing offers maximum protection. The design allows the angled head of the Lighthawk (see page F09) to be directed on to the work area when working from a bucket.
