

## Trench Guard™

### Innovative Trench Covering System

The Trench Guard system sets a new standard in trench cover safety.

A careful assessment of traditional fibreglass or plywood trench covering methods reveals serious shortcomings with no means of joining boards together, thus running the risk of them moving apart and leaving a dangerous hole that a vehicle or pedestrian might slip down.

By contrast, the new Trench-Guard panels have interlocking flanges that connect them firmly together to prevent this happening. They are made from an ultra tough plastic which, unlike plywood or fibreglass, does not become splintered with regular use. The panels and their matching rubber end ramps have only a very gentle slope on their edges, making them very safe for use in pedestrian areas.

- Innovative and ultra safe trench cover for access across trenches and excavations
- Steel reinforced trench cover
- Rated load 500kg per wheel (ie 2 tonnes per car), span 600mm
- Size: 1.4m x 800mm
- Non shatter properties for additional safety
- Lightweight unit for easy transportation

CAT NO	DESCRIPTION	DIMENSIONS	WEIGHT
<b>TG1408</b>	Trench Guard	1.4m x 0.8m	22kg
<b>TGR</b>	End Ramp	1.4m x 0.2m	14kg

## Kerbhopper

### Lightweight portable ramp

The Kerbhopper is a unique, lightweight and highly portable ramp. Designed for private and commercial use, it is unrivalled in safety and usability. Its strength and durability have made it one of the most innovative and cost effective solutions for unlevel access situations.

The Kerbhopper has been tried and tested in many private and commercial locations. The design has been well proven and its high non-slip surface remains highly effective even in adverse weather conditions. It is a revolutionary product for wheelchair, disabled and utility construction access.

Utility companies, councils and contractors have found the kerbhopper invaluable throughout road and motorway construction projects. They are a highly effective and convenient alternative to plywood, steel, concrete or tarmac ramps. The Kerbhopper is available with permanent corporate logos, and high visibility colours, enhancing any companies efforts to deal with public safety issues. Size 1050mm x 680mm. Weight 8.5kg

- Manufactured from glass reinforced plastic, the products have no scrap value, thus eliminating on-site theft problems.
- Will not warp or delaminate in adverse weather conditions. High non-slip surface - even in the wet
- Designed for kerb and ridge access
- Durable and lightweight
- High visibility colours with reflective markings
- Stows comfortably in most cars
