

The Spring Cone is a unique product that is ideally suited for utility vehicles where space is short and weight restrictions apply.

For storage the cones are simply placed one over the other and then collapsed down into their own storage bag.

Available in bags of four or six cones. Cones comply with all the requirements of BS EN 13422 : 2004.

Ideal for any situation where a temporary barrier is required. The cones are highly reflective and come with a rubber base which grips the road for added stability.

The mesh material of the cone body ensures that they are not adversely affected in windy conditions. Quick and easy to set up and collect, the spring cone is approximately half the weight of a traditional cone and takes up approximately one third of the space.

Cone Light

CAT NO: QLED-A

Cone light fits easily into the top of the spring cone. The 4 x LEDs can be set in flashing or permanent mode. The light is powered by 2 x AA batteries.

Pulsar Lights

Ideal for placing between cones, the Pulsar Lights are multi-mode rechargeable LED warning lights. Designed for traffic control, signalling, hazard awareness and vehicle safety, they are ideal for professional applications including the Utilities, Police, Fire and Highway Services. Supplied as a set of 6, these small but robust units are manufactured in shock resistant plastic housing, are waterproof (up to 10 metres) and virtually indestructible (withstanding most vehicle weights if crushed). Incorporated magnets allow attachment to vehicles or any metal surfaces. Ingeniously designed, the Pulsar is charged within its case, via the integral metal sensors, using either a mains or vehicle power source. The LED charging indicator gives you an indication of the battery status. The Pulsar kit is supplied with 6 light modules, mains and vehicle chargers.
