

Bird Spikes

CAT NO: PP04

Designed to prevent birds landing on plant such as transformers or auto-reclosures. Bird Spikes are ideal for use in areas such as sanctuaries for birds of prey or other protected species. They can also be used to prevent fouling associated with birds gathering close to residential areas. Easily bonded with silicone. Clear plastic, supplied in 330mm lengths.

Bird Flight Diversers

For use on overhead powerlines, the Bird Flight Diversers can be easily seen by large birds such as swans and geese preventing outages caused by bird strikes to the line. Can be fitted live from the ground with the use of operating rods and adapter or with a Shotgun Stick. Can be applied to conductors on 25 - 150mm². Standard size is 200mm diameter, 600mm diameter available on request.

Firefly Bird Flight Diverter

CAT NO: BB-FF11

The Firefly reflects sunlight during daylight hours and utilises luminescent light emission during dusk and night time hours. The diamond bar and luminescent material causes sunlight to become refracted during daylight hours, providing a "Sparkle Effect" which can be seen by birds and humans up to a quarter of a mile away. This sparkling and refraction of light allows the birds to change their flight pattern to divert around marked wires or potential roosting sites.

Woodpecker Repellent Spray

Woodpecker Deterrent and Protective Coating Spray is designed to provide a protective skin to cover areas repaired with woodpecker hole filler and where woodpecker damage is anticipated.

This repellent product is a non-reverting, non-oxidising, protective latex film with a natural smell & taste deterrent. This non-toxic, environmentally safe woodpecker control product works on birds that peck and damage wood or other surfaces. When applied correctly, the woodpecker repellent spray slowly emits encapsulated deterrent, providing protection from future damage.
