

Fibreglass Tapered Sectional Ladder

This unique Sectional Ladder delivers a maximum height of 21 feet. The sections are tapered and stiles overlap. The rungs nest in a channel on the top of the adjoining section and are then locked in place using the hand operated taper lock system.

This ladder system is very adaptable: by adding up to 3 sections to the base, the ladder can be used at heights of 11', 16' and 21'. Ideal where space in a vehicle is limited.

Moulded end caps are available for the base and middle sections. The base section comes with swivel type safety shoes as standard.

Moulded end caps

Hand operated taper-lock secures mating sections

CAT NO	DESCRIPTION
S7906-1	6' Tapered Base Section
S7906-2	6' Tapered Intermediate Section
S7906-3	6' Tapered Top Section
