Saflok™ Pole Climbing Fall Arrest System

The unique Saflok™ Pole Climbing Fall Arrest System allows linesmen to free climb poles with 100% fall protection. In addition, it provides linesmen various options to suit their own climbing styles for ultimate flexibility and ease-of-use. This system has been specifically designed to address most congested pole scenarios allowing the worker to climb into position around obstructions. This pole climbing system makes climbing fast, simple and safe. It also ensures rescuing a casualty from the pole is safer, faster and easier. The system comes in a durable waterproof bag .

This system can also be adapted for use on towers and in sub-stations by connecting to an I-beam, angle iron, lattice steel or other suitable structure.

Benefits include:

- Provides temporary anchor points before leaving the ground
- Achieve greater heights with the added safety of a non-conductive dielectric lifeline
- Installation is quick and simple and completed without tools
- Faster climbing method
- Complete system in one easy to transport carrying bag

Extensively field tested by linesmen, facility and construction workers that has successfully proven the ease of use and fall protection capabilities of the Saflok™ Steel Structure Fall Arrest System.
